

Report Berbasis MVC Pada VB.Net

Mengambil Data Report

```
Imports MySql.Data.MySqlClient
```

```
Public Class ReportModel
```

```
    Public Function GetPenjualan() As DataTable
```

```
        Dim dt As New DataTable
```

```
        Using con As MySqlConnection = koneksi.conn()
```

```
            con.Open()
```

```
            Dim sql As String = "SELECT * FROM penjualan "
```

```
            Using da As New MySqlDataAdapter(sql, con)
```

```
                da.Fill(dt)
```

```
            End Using
```

```
        End Using
```

```
        Return dt
```

```
    End Function
```

```
End Class
```

Controller: Penghubung Model ↔ View

```
Public Class ReportController
```

```
    Private _model As ReportModel
```

```
    Public Sub New()
```

```
        _model = New ReportModel()
```

```
    End Sub
```

```
    Public Function LoadPenjualanReport() As DataTable
```

```
        Return _model.GetPenjualan()
```

```
    End Function
```

```
End Class
```

View (Form): Menampilkan Report

```
Imports Microsoft.Reporting.WinForms
```

```
Public Class frmReportPenjualan
```

```
    Private _controller As ReportController
```

```
    Private Sub frmReportPenjualan_Load(sender As Object, e As EventArgs)  
Handles MyBase.Load  
        _controller = New ReportController()  
        LoadReport()  
    End Sub
```

```
Sub LoadReport()
```

```
    Dim dt As DataTable = _controller.LoadPenjualanReport()
```

```
    ReportViewer1.LocalReport.DataSources.Clear()
```

```
    ReportViewer1.LocalReport.ReportPath =  
"Reports/RptPenjualan.rdlc"
```

```
    Dim rds As New ReportDataSource("DataSetPenjualan", dt)  
    ReportViewer1.LocalReport.DataSources.Add(rds)
```

```
    ReportViewer1.RefreshReport()  
End Sub
```

```
End Class
```
